

# A Few Examples that Prove God Exists

(For Scientists / Academics who believe that there is no “God”)

**\* \* \* NOTE \* \* \***

MANY more examples could be provided, but even just these three will make the case.

---

## 1) **Everything is Energy / Light. Where did It come from?**

- Energy cannot be created or destroyed; it simply changes form.
- “Something” cannot come from “Nothing”.
- Formless can become Form, and the Invisible can become Visible; however, Energy exists and, therefore, must have a “Place of Origin”.
- If there is no God, how can there be any Energy / Light or any of the Chemicals / Particles that make up the Foundation of the Matter Universe?

## 2) **Life (and ALL aspects of It) is Infinitely complex, organized, structured, and perfectly functioning. Can that happen by chance?**

- It cannot happen by the random mixing of Chemicals and the chaotic collision of Particles.
- A Swiss Watch or Supercomputer, for example, cannot exist without a “creator” / “intelligence” to design it, make the parts, and assemble it to properly operate.
- The Matter Universe is infinitely more complex, so how can that happen without a “Creator” / “Intelligence” . . . a “God”?
- Nearly all of the Great Scientists throughout history were religious and believed in “God” (e.g., Copernicus, Bacon, Kepler, Galileo, Descartes, Pascal, Newton, Boyle, Planck, Einstein, Tesla).

## 3) **DNA contains genetic information / “blueprints” / “instructions” for all organisms to develop, function, and reproduce. Where does the information come from?**

- Some people will still claim that Energy / Light can exist without God. Some people will still claim that Perfect Order & Function can exist without God. However, even they cannot claim that Information can exist without God.
- There cannot be ANY information in our society without intelligence behind it.
- How can there be ANY “Information” throughout the Matter Universe without a “Higher Intelligence” behind it?
